Team Name, Motto, Mascot

Team Name: Fitness Scholars

Motto: “Learning Smarter, Growing Stronger”

Mascot Name: Fit Scholar

Vision

To create a future where technology is leveraged to achieve fitness goals efficiently, promoting healthier habits that will enable every scholar to achieve both physical and mental well-being without compromising academic achievement.

Mission/Purpose

Fitness Scholars mission is to create an AI-Based Health and Fitness app designed for a student's busy lifestyle by providing personalized workout routines, meal recommendations, and general wellness suggestions to better help students achieve their fitness goals while also achieving their academic goals. We in fitness scholars aim to build a strong team dynamic where helping one another with any difficulties is commonplace. We will strive to share and improve each other's ideas and further encourage creativity within the team.

Goals

- Complete project milestones on time, measured by whether deadlines are met by everyone on the team over the course of the project.
- Maintain consistent communication between the team using chat channels such as Discord and Zoom chats. Measured by how consistent each member is participating in team collaboration chats
- Improve teamwork within the team by having team member check-ins and offering feedback to each member of the team to increase the team's flow. This can also be measured by how many of the blockers/challenges involve poor team communication
- Increased creativity by encouraging new ideas and perspectives, this can be measured through the ideas that are presented in the meeting and the notes from brainstorming sessions. Each member should try and present at least one idea or solution during meetings

- Encourage outside perspective through feedback from peers, measured by trials and tests done when the product/demo is complete. Get 5 outside perspectives on the app from its desired demographic.

Roles

Role Name	Responsibilities	Team Member Assigned
Coordinator	Prepares meeting agenda in advance, organizes discussion topics, task assignments, and ideas.	Trinity
Timekeeper/Scribe	Records the results of meetings and tracks the time allocated to meeting agendas, helps to ensure meetings stay on schedule.	Ken
Research Manager	Conducts and keeps track of background research. Gathers information and summarizes for use in design and development decisions.	Salim
Design Manager	Keeps track of design ideas and structures to keep records of design concepts and possible revisions.	Charan
Presentation Manager	Creates presentations for class and helps keep the team informed and practiced on presentations.	Trinity, Rohan, Ken
Quality Assurance	Tests functionality of the app identifies bugs and provides verification ensuring usability requirements are met.	Edsson
Database Coordinator	Manages and handles data storage and coordinates database integration within the application.	Rohan
Fitness/Content Specialist	Provides and researches knowledge on fitness and health. Ensuring content accuracy and assisting with features related to such.	Trinity, Ken, Charan, Salim
Team Facilitator	Manages team and tracks deadlines.	Trinity
Lead Developer (Front/Back End)	Implements application functionality. Takes lead on coding contributions and ensures technical consistency of the application.	Edsson (Back end), Trinity (Front end)
AI/ML specialist	Research and integrates AI/ML functionality. Assists with model selection and logic.	All Team Members

Ground Rules

The following ground rules will outline how the team intends to work together throughout the entire project. These rules establish our shared expectations for organization, task completion, communication, and most importantly teamwork. By clearly defining how each decision will be made, how responsibilities are handled, and how each team member interacts with each other.

The team will aim to promote accountability, efficiency, and a respectful collaborative environment that supports the accomplishment of our project.

Administrative

The Fitness Scholars team will meet in person after class every Tuesdays to review weekly goals, discuss progress, and assign upcoming tasks. During these meetings, the designated Timekeeper/scribe will document attendance, key discussion points, action items, and deadlines. If a team member is unable to attend, a summary email or message will be shared to ensure all members remain informed and aligned with project expectations.

Additional virtual meetings will be held on Sundays at 2:00 PM via Zoom, as scheduling permits. If an in-person meeting is necessary on Sundays, it will be held on campus in Room D240 or a designated study lab in the Delta Building. Meeting locations and links will be communicated in advance through the team's primary communication platform.

Project progress will be monitored through weekly team reports, which will document completed tasks, pending items, and any challenges encountered by individual team members. If progress begins to fall behind schedule, the Coordinator and Team Facilitator will work together to identify blockers, redistribute workload if necessary, and develop a corrective action plan to ensure the project remains on track.

All administrative communication, including announcements, meeting reminders, and shared documents, will be centralized using agreed-upon collaboration tools (such as Discord, Google Docs, and Zoom) to maintain organization, accountability, and transparency throughout the project lifecycle.

Task

Our team goal will be to use consensus voting when making decisions but will resort to majority rule if there is any divide to encourage fairness. Ties will be addressed using a coin toss.

All discussions will be professional, respectful, and end goals in mind. Disagreements will be addressed by the Team Facilitator and

Each member of the team should take responsibility for their roles and responsibilities and maintain engagement throughout the project. Team members will participate in every meeting, contributing to the overall success of the project. Work will be split fairly among the team, ensuring no team member is taking the brunt of all the work.

Most problem-solving will be addressed as a group to encourage participation and allow solutions to be presented. This ensures that the different backgrounds of each team member are utilized during troubleshooting and problem solving.

Interpersonal

Team members will listen carefully to each other and communicate openly without fear of judgment. We will respect one another and value everyone's ideas and perspectives. When difficulties come up, we will support and help each other, remembering that we are a team and succeed by working together.

Procedures

Our team will gather data from various sources to assess our adherence to the established ground rules, evaluate the team's overall effectiveness, and continuously improve our procedures throughout the project. Three primary documents will serve as evidence of our team's processes:

Meeting Notes

Attendance, agenda items, decisions, action items, and any other notable events will be transcribed by the Timekeeper and stored in the team's meeting notes folder. Recording how discussions are held and whether procedures such as starting on time and maintaining respectful dialogue are being followed will provide solid evidence of how well the team adheres to its agreed-upon interpersonal and administrative rules.

Weekly Team Reports

Each team member is expected to contribute to a weekly report that summarizes completed tasks, blockers, and any interpersonal or workflow challenges encountered. These reports will provide concrete data on communication patterns, conflict resolution, and the team's ability to support one another when obstacles arise.

Shared Document

A current progress tracker will record assigned tasks, deadlines, and status updates which will help the team evaluate adherence to task-related procedures. Repeated delays, uneven task distribution, or unclear responsibilities will be used as evidence to adjust our processes.

Plans and Tools for Gathering Team Self-Assessment Data

Team self-assessment data will be collected using a combination of qualitative and quantitative tools to evaluate team performance, collaboration, and overall effectiveness throughout the project.

Main data sources will include:

- Meeting minutes recorded by the Timekeeper/Scribe, documenting attendance, discussion topics, task assignments, deadlines, and overall team engagement.
- Weekly team reports, which will track individual contributions, completed milestones, and unresolved issues.
- A shared progress-tracking document that logs development stages, design updates, testing results, and deployment readiness.

To further support self-assessment, the team will conduct informal peer feedback check-ins periodically, allowing members to reflect on communication, workload balance, and team dynamics. These reflections will help identify strengths, areas for improvement, and potential risks early in the development process.

Additionally, feedback from external users and peers during testing and demo phases will be documented and reviewed as part of the assessment process. This data will help measure how effectively the team collaborates to respond to feedback and improve the final product.

All collected self-assessment data will be used to promote accountability, improve teamwork, and guide adjustments to team processes, ensuring continuous improvement throughout the senior project.
